Help us end October's Breast Cancer Awareness Month with a bang by joining us for a 1- hour tour of the Burnham Institute for Medical Research as they take us through parts of their lab, auditorium and talk briefly about the research they do for cancer. Cancer claims the lives of more than 500,000 Americans each year, with almost 1.5 million new cases of cancer diagnosed annually. Burnham utilizes a unique, collaborative approach to medical research and has established major research programs in cancer, neurodegeneration, diabetes, and infectious, inflammatory, and childhood diseases. And as an NCI-designated Cancer Center, they test new approaches in cancer research, recruit talented investigators and operate scientific Shared Resources.
